

Surrogacy Support

Counseling and Pre-Transfer Services

Progyny recognizes there are many paths to parenthood, and we want to help you fulfill your dreams of family. Surrogacy is a family building option where a gestational carrier or surrogate agrees to carry a child for an individual or couple who will become the child's parent(s) after birth.

Surrogacy Information and Counseling

Our Progyny Care Advocates (PCAs) include a team of surrogacy coaches who can provide information and resources throughout the surrogacy process including information on what to expect, average costs, state laws and legal resources, guidance specific to same-sex and transgender individuals or couples, and referrals to surrogacy agencies.

Surrogacy Benefit Management (Pre-Transfer Embryology Services)

The Progyny Smart Cycle benefit covers pre-transfer embryology services, including diagnostic testing, fertilization, preimplantation genetic testing, and cryopreservation for the covered member who is the intended parent. In most cases, the Smart Cycle benefit may not be used for services for the gestational carrier or surrogate, as the surrogate is not a covered member.
